

Ferry County Public Hospital District Swing Bed Program

By Cherie Hanning, CNO

Following a hospital stay related to surgery, illness or injury, some patients require further care to reach an optimal level of strength and wellness before safely returning to their home or skilled facility. The Swing Bed Program at Ferry County Public Hospital District (FCPHD) helps patients achieve this goal through hospital-based skilled nursing care.

After a hospital stay, many patients in need of additional care and support can continue their stay and maintain the high level of devoted care that FCPHD traditionally offers. As a result, patients receive continued individualized assessment and treatment resulting in improved quality of care. Examples of Swing Bed recovery include: Stroke, hip or knee surgery, wound management, rehabilitation needs, and physical or occupational therapy.

Advantages of our Swing Bed Program:

Providers are available 24/7. We also offer onsite lab services, pharmacy, medical imaging, physical and occupational therapy, with specialists available for consultation, all within a 25-bed acute care community hospital.

The FCPHD Swing Bed Program improves the transition of care, helps to prevent hospital re-admissions, and allows better training/education for both the patients and their families.

If you should have any questions or would like more information on the FCPHD Swing Bed Program, please call Cherie Hanning at (509) 775-8210.
