

Safer imaging at Ferry County Hospital

By: Adam Volluz, Radiology Manager

Ferry County Hospital Imaging Department is pleased to announce the addition of a brand new x-ray machine. This machine is equipped with an elevating table, floating table top, extended imaging tube range of motion in a compact, space saving footprint. The elevating table makes it easier for the patient to transfer onto the table from a standing or sitting position. The floating table top allows the technologist to position the patient while reducing the amount of patient movement. With the additional range of motion offered with the imaging tube, we can now image the standing patient without the need of a dangerous and sometimes painful stair climb. The smaller footprint allows for easier and safer wheelchair and stretcher access and mobility. If you would like a tour of our Imaging department, please contact Adam Volluz at 509-775-8233.

Below is a list of services offered at Ferry County Hospital's Imaging Department:

- **Computed Tomography (CT):**
Available by appointment. Monday-Friday 9:00am-4:30pm. Select exams are available Saturday and Sunday 7:30am-5:30pm
