

Swing Bed

Hours of Operation: 24 hours

During some hospitalizations, patients may require further care to reach their highest level of strength and wellness, in order to return home safely. A swing bed program allows patients the opportunity to continue in the same facility, in their same bed, if they started here; or to be admitted from another facility.

A swing bed program offers the patient the option to extend a stay related to surgery, illness, or injury. Ferry County Health's comprehensive skilled swing bed program provides our patients access to rehabilitation and the opportunity to remain close to their families, home, and community.
